BOXi allows users to create, maintain, schedule and run ad-hoc queries and reports from a variety of data sources. Business Objects version XI is a scalable, web-enabled, commercial off-the-shelf (COTS) business intelligence tool which is used for report creation, distribution, and ad-hoc queries in support of Army civilian human resources (HR) and equal employment opportunity (EEO). It provides a user-friendly semantic layer which generates structured query language (SQL) for data retrieval from Army civilian HR databases. Once retrieved, drill-down and further analysis can be performed, reports distributed via email, posted to a portal, etc. Business Objects version XIR2 represents the industry standard in business intelligence (BI) and is expected to provide a zero-footprint solution for all current users as well as provide enhanced security and ease-of-use through portal integration and common access card (CAC) single sign-on.

The types of PII collected pertains to financial, educational, employment, military, security, and Equal Opportunity information. The intended use of this PII retrieved from the various data sources is to meet internal and external reporting and Human Resource, as well as, Equal Opportunity management requirements.

(2) Briefly describe the privacy risks associated with the PII collected and how these risks are addressed to safeguard privacy.

Internal and external risks are associated with the protection of PII; however, risks are minimized to an acceptable level. Safeguards are employed to detect and minimize unauthorized disclosure, modification, and/or destruction of data; thus we believe the risk to the individual's privacy to be minimal.
