g. Summary of DoD information system or electronic collection. Answers to these questions should be consistent with security guidelines for release of information to the public.

(1) Describe the purpose of this DoD information system or electronic collection and briefly describe the types of personal information about individuals collected in the system.

The Enlisted Promotion Model (EPM) is an Oracle database with a PowerBuilder interface used to determine monthly promotion requirements, for Sergeant through Sergeant Major by Military Occupational Specialty (MOS) and Grade. Based on those requirements the model then selects the appropriate number of eligible soldiers at the SSN level of detail. Output includes numerous management reports, cutoff scores for junior promotions, sequence numbers for senior promotions and a 'by name' list for publication.

PII collected includes personal and military record data.

(2) Briefly describe the privacy risks associated with the PII collected and how these risks are addressed to safeguard privacy.

All systems and environments have threats that seek to exploit and cause harm to the information. Some threats are natural, some are inherent in the system design, some can be attributed to unauthorized personnel, and some to authorized personnel who make mistakes. Four general categories of threats exist: human-intentional, human-unintentional, structural, and natural. The system is maintained in a controlled facility. Appropriate technical, personnel, physical and operational safeguards are in place for the access, collection, use and protection of information. Due to the level of safeguarding, we believe the risk to individuals' privacy to be minimal.
