(1) Describe the purpose of this DoD information system or electronic collection and briefly describe the types of personal information about individuals collected in the system.

The Forensic Toxicology Drug Testing Laboratory - WEB Reporting System (FTDTL-WRS) is the umbrella system of applications required to implement the Congressionally mandated testing of military and select government civilians for the presence of illegal Drugs. Drug testing is also conducted on personnel entering the military who have a pre-entrance test requirement and Reserve Officer Training Corps (ROTC) or Service academy cadets who are tested as part to their entrance examination.

The Forensic Toxicology Drug Testing Laboratory - Information Management System (FTDTL-IMS) is the database portion of FTDTL-WRS. It provides a database to automate the tracking and documenting of urine specimens through the drug testing and validation process from the time the urine specimen is taken until final disposition of the specimen. FTDTL-IMS records the identification of all laboratory personnel and tests being performed at each stage of the testing and validation process. Specimens and positive test data remain at each drug-testing laboratory pending resolution of positive test results. Test results may be used in litigation. FTDTL IMS supports the DoD drug deterrence program for the readiness of the military forces, and operates in facilities/units of the Drug Deterrence Office (DDO).

Demographic data is collected in this system.

(2) Briefly describe the privacy risks associated with the PII collected and how these risks are addressed to safeguard privacy.

Risk	Mitigation
1. Inaccurate PII Data:	Data is provided from electronic unit rosters. Individuals who are selected for testing are required to review SSNs on documentation and initial to insure validity.
2. Unauthorized access to PII Data:	Access to servers with PII data is limited based on "Need To Know", and require Login and password. Access logs track all attempts to gain access to servers and applications and are reviewed daily by the FTDTL-WRS System Administrator (SA). The SA follows up on any suspicions logon attempts. Hard copy records are kept in locked containers and are shredded when no longer needed (six years).
3. Unauthorized Disclosure of PII Data:	Access to PII data is based on "Need To Know". Individuals are not granted access to servers, applications or data unless they have "Need To Know" and have approval by someone authorized to grant access. All hard copies containing PII data are kept in locked containers and are shredded when no longer needed. Tapes and disks that have been used with PII data are secured when not in use and destroyed when no longer required.
