g. Summary of DoD information system or electronic collection. Answers to these questions should be consistent with security guidelines for release of information to the public.

(1) Describe the purpose of this DoD information system or electronic collection and briefly describe the types of personal information about individuals collected in the system.

PEPDUS3 is a batch application that uses input from existing systems to update personnel data at the top-of-the-system, providing error feedback as well as change notices to input sources. The usefulness of the Total Army Personnel Data Base – Active Enlisted (TAPDB-AE) rests entirely upon accurate processing by PEPDUS3 of data received from input sources. Information from this system is used by Army G-1 to determine readiness, strength, promotion, assignment, and training requirements. Personal information maintained by the system includes identification data, contact information, dependent data, medical and disability information, education information, and military personnel data.

(2) Briefly describe the privacy risks associated with the PII collected and how these risks are addressed to safeguard privacy.

All systems and environments have threats that seek to exploit and cause harm to the information. Some threats are natural, some are inherent in the system design, some can be attributed to unauthorized personnel, and some to authorized personnel who make mistakes. Four general categories of threats exist: human-intentional, human-unintentional, structural, and natural. The system is maintained in a controlled facility. Appropriate technical, personnel, physical and operational safeguards are in place for the access, collection, use and protection of information. Due to the level of safeguarding, we believe the risk to individuals' privacy to be minimal.
