**g. Summary of DoD information system or electronic collection. Answers to these questions should be consistent with security guidelines for release of information to the public.**

- (1) Describe the purpose of this DoD information system or electronic collection and briefly describe the types of personal information about individuals collected in the system.

The Army Safety Performance Improvement Reporting Enterprise (ASPIRE) is a safety management software program currently running at Red River Army Depot. The ASPIRE software is designed to provide support for a series of closed-loop processes that will increase the safety performance of their workforce. ASPIRE provides the Safety Offices, Commanders and Product Supervisors with accountability for reporting, investigation, and actions resulting from safety incidents. The ASPIRE software also provides a closed-loop process for performing, reporting on, and correcting hazards resulting from safety inspections. The system includes a mobile data collection component for performing checklist-based safety inspections. The system also provides both standard and customizable reports at multiple organizational levels that enables the Safety Offices, Commanders and Production Supervisors to evaluate safety performance across installations or within an installation. ASPIRE also provides a dashboard view of safety for the installation/organization which provides leadership an easy to understand view of safety for their organization.

- (2) Briefly describe the privacy risks associated with the PII collected and how these risks are addressed to safeguard privacy.

Privacy risks associated with ASPIRE are low due to the fact that limited PII will be collected. Risks are mitigated by requiring CAC authentication in addition to role based password access based on an official need-to-know. Every individual who has access to the system, with regards to using the entered data, has undergone a security background review, privacy and security training.
