g. Summary of DoD information system or electronic collection. Answers to these questions should be consistent with security guidelines for release of information to the public.

(1) Describe the purpose of this DoD information system or electronic collection and briefly describe the types of personal information about individuals collected in the system.

The Total Army Personnel Data Base - Active Enlisted is the central database for all information pertaining to Active Army Enlisted Soldiers. It contains a set of logically integrated and physically distributed databases. TAPDB-AE is updated daily (Monday thru Friday), and HRC EPMD is the functional proponent.

Types of PII collected include personal, contact, dependent, emergency contact, medical, disability, employment, education, and military record data.

(2) Briefly describe the privacy risks associated with the PII collected and how these risks are addressed to safeguard privacy.

All systems and environments have threats that seek to exploit and cause harm to the information. Some threats are natural, some are inherent in the system design, some can be attributed to unauthorized personnel, and some to authorized personnel who make mistakes. Four general categories of threats exist: human-intentional, human-unintentional, structural, and natural. The system is maintained in a controlled facility. Appropriate technical, personnel, physical and operational safeguards are in place for the access, collection, use and protection of information. Due to the level of safeguarding, we believe the risk to individuals' privacy to be minimal.
